EDUCATION

VIT Bhopal University <i>B.Tech in Computer Science and Engineering — CGPA: 8.75</i>	2023 – Present <i>Bhopal, India</i>
FIITJEE Junior College <i>Intermediate (12th Grade) — 77.4%</i>	2020 – 2022 <i>Visakhapatnam, India</i>
Visakha Valley School (CBSE) <i>Secondary Education (10th Grade) — 82.8%</i>	2019 – 2020 <i>Visakhapatnam, India</i>

COURSEWORK

Courses: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Machine Learning, Artificial Intelligence, Probability & Statistics

TECHNICAL SKILLS

Languages: Python, Java, C++
Machine Learning & Deep Learning: TensorFlow, PyTorch, Scikit-Learn, CNN, OpenCV
Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn
Web & Deployment: Flask, Streamlit, HTML, CSS, JavaScript
Databases: MySQL, SQLite
Developer Tools: Git, GitHub, Jupyter Notebook, VS Code
Operating Systems: Windows, Linux

PROJECTS

Alzheimer's Disease Detection Using Deep Learning <i>Python, TensorFlow, CNN, OpenCV</i>	2026
- Developed a deep learning-based system for Alzheimer's disease detection using MRI brain scan datasets and medical image classification techniques - Implemented CNN models using TensorFlow and Keras for automated feature extraction, disease classification, and prediction analysis - Performed image preprocessing, augmentation, normalization, and model evaluation using accuracy, precision, recall, and F1-score metrics - Optimized model performance through hyperparameter tuning and regularization techniques to improve prediction accuracy	
Multiple Disease Prediction System <i>Python, Scikit-Learn, Streamlit, Pandas, NumPy</i>	2025
- Designed and developed a machine learning application capable of predicting Diabetes, Heart Disease, and Parkinson's disease using patient health parameters - Performed data preprocessing, feature engineering, and exploratory data analysis using Pandas, NumPy, and visualization techniques - Implemented and compared Logistic Regression, SVM, Decision Tree, and Random Forest models for accurate disease prediction - Developed an interactive Streamlit web application to provide real-time disease prediction through a user-friendly interface	
Healthcare Management Application <i>Python, Flask, MySQL, HTML, CSS, JavaScript</i>	2024
- Developed a healthcare management application for patient records, appointment scheduling, medical data management, and healthcare workflow optimization - Built backend services using Flask and integrated MySQL database for secure patient information storage and retrieval - Implemented authentication, appointment booking, patient management, and doctor management functionalities within the application - Designed responsive frontend interfaces using HTML, CSS, and JavaScript to enhance usability and user experience
